

Hot Melt Rebuild & Repair Services

When it comes to your hot melt adhesive operations, uptime and efficiency are key to long-term success. Over time, your melters and other components will inevitably experience wear and tear, leaving you to choose between costly OEM replacements or other, more cost-effective alternatives.

One cost-effective option is to repair or rebuild your existing equipment. At Keystone Industries, we offer expert repair services for a wide range of equipment and parts, including:

- Adhesive Melters
- Applicator Heads
- Circuit Boards (PCBs)
- Modules
- Pumps
- and much more.

If a type of equipment is not listed above, contact us to determine whether your best option will be to rebuild, repair or replace it.

Hot Melt Repair & Exchange Programs

In addition to our standard repair/rebuild services, Keystone Industries offers an exchange program for select equipment that can minimize your downtime. Our repair/rebuild program options are:

Hot melt equipment repair/rebuild services: If your old part is already offline, system can be down or you had a spare to drop in place, contact Keystone for a repair or rebuild of your old part. The repair/rebuild process works as follows:

1. Contact Keystone Industries to determine if your part can be rebuilt or repaired
2. Send your equipment to us
3. Keystone evaluates and sends quote to you for approval to proceed.
4. Place your order
5. Keystone repairs/rebuilds the equipment and ships to you.

Hot melt equipment exchange program: When no spare is available on-hand and removing your existing equipment will result in downtime, ask about our exchange program. This program works as follows:

1. Contact Keystone Industries to determine if your equipment qualifies for an exchange and an exchange is available
2. Place your order
3. Keystone ships rebuilt equipment to you
4. Upon receipt of the rebuilt equipment, you can remove your existing equipment and send it to Keystone in exchange for the equipment received

Please note that the exchange program is available only for select types of equipment, and availability is subject to change daily.

What are the Benefits of Rebuild/Repair Versus Purchasing New Hot Melt Equipment?

- **Rebuilding or replacing is often more cost-effective:** Replacing a part means you'll be rebuying it at full price. Repair or rebuild is often the more cost-effective option because repair expenses are typically much lower than the cost to replace.
- **Keystone has high quality standards for rebuilt and repaired parts:** If you choose Keystone Industries to repair or rebuild a broken part, you can feel confident in the result. Every one of our repair and rebuild projects is tested to meet our quality standards. Keystone provides warranties on melters and pumps and a 100% money back guarantee.
- **Available exchanges can minimize downtime:** If Keystone Industries has an exchange option available for your needed equipment and your existing equipment is safe to operate in a reduced capacity, you can receive the rebuilt equipment before removing and shipping out your old equipment. This greatly reduces the downtime experienced for your operation, saving precious dollars.

How to Get Started
